

# version 5.0

**AV-BASE Systems presents** the latest version of the legendary WinAir application which became an aviation industry standard. WinAir 5.0 takes aviation maintenance and inventory control to a new level providing unprecedented speed and functionality.

**Here is the list of the most remarkable features included in the version 5.0:**

### **New Fresh Look**

See the fresh new look and crisp screen forms with WinAir 5.0

### **Enhanced Usability**

Take advantage of your mouse's scroll wheel to navigate grids and lists. Scrolling is now much easier and faster.

### **Worry-free Printing**

The new WinAir runtime engine includes several enhancements that improve report printing stability.

### **Improved WinAir Performance**

With version 5.0.0, WinAir is overhauled with a new run-time engine and a wizard-style tool that copies Objects to the local drive of the computer. As a result, the application is optimized to reduce network traffic dramatically thus minimizing network roadblocks. This frees up network resources within your organization to complete other tasks.

### **Everything In Order**

Our latest development – the Object Updater is an integral tool that synchronizes the Object Files on the local drive of your computer with the Objects on your Network. Every time you run the Update Center and then start up WinAir, the Object Updater will check for new files and update them as required.
